ABSTRACT:

PROBLEM TO BE SOLVED: To provide a Web managing system for automatically and surely updating a Web page having the mutually complicated relation of hyper text system without a manual operation.

SOLUTION: An open folder 15 storing the Web page, a post folder 11 updating the Web page and storing a non-open page, a schedule table 12 storing update information containing the update date/time of the Web page, a page before update in the open folder 15 and the updated page in the post folder 11 are provided. When a timer service part 13 detects the update date/time arrival of update information stored in the schedule table 12, an open service part 14 deletes the page before update in the open folder 15, which is shown by update information by moving it into a backup folder 16, and newly registers the page after update in the post folder 11 into the open folder 15.
